

Design and Development of a Virtual Community for Collaboration on Businesses and Projects

BY

**OBELE SOCHIMA JAMES
U14/NAS/CSC/071**

Being A B.Sc. Project Work Submitted In Partial Fulfilment Of The Requirements
For Award Of Bachelor Degree In Computer Science Godfrey Okoye University.

SUPERVISOR: DR. N. M. OZOFOR

**Department Of Computer Science/Maths
Godfrey Okoye University, Enugu**

JULY 2018

CERTIFICATION

I hereby declare that the work presented herein was done by me and not by a third party. Should I be convicted of having cheated in this work, I shall accept the verdict of the university.

Sochima J. Obele, U14/NAS/CSC/071

APPROVAL

This project is approved for submission

A handwritten signature in blue ink, appearing to be 'Dr. N. M. Ozofo', is written over a horizontal line.

DEDICATION

This project is dedicated to God Almighty, trusting in His ability to see this grow beyond just a project work to being improved and established; to every promising individual and organisation that believe and work towards giving ourselves and others a better computer experience and also to computer science students in Godfrey Okoye University and beyond, trusting that this will serve as an educational resource and inspiration causing subsequent development and innovation.

ACKNOWLEDGEMENTS

The preparation and eventual completion of this project work is as a result of direct/indirect input and support by various entities:

I, without a doubt acknowledge God Almighty for His wisdom, grace, provisions, enablement, mercies and the gift of life through the time of this work and to date; and not forgetting the immense contribution of Living Faith Church Thinkers Corner, NCF (New Covenant Family), NIFES GOU/IECE and every other institutions towards my academic and spiritual excellence and to others as well.

I also with deep regard and honour appreciate and acknowledge my dearly beloved family members, singling out my parents, Hyacinth & Theresa Obele and brother Ugochukwu, my uncle and wife Ken & Ngozi Opara and my cousins Ebuka & Chibuzo Ikpa for direct/indirect counsel, sponsorship, support, love, care, inspiration, provision and believing in me up to this day.

I am profoundly grateful and appreciate my project supervisor, Dr N. M. Ozofor, a renowned lecturer and course adviser in the Department of Computer Science/Maths, Godfrey Okoye University, for his patience, friendship, tolerance, support, guidance and suggestions for improvement/correction covering matters of style, manner and direction and also for making time available to supervise this project work in spite busy schedules and numerous engagements.

I acknowledge and highly esteem every student/staff in the Department of Computer Science/Maths of Godfrey Okoye University even the late Dr G. A. M. Ikekeonwu for their support and assistance while in school, Aptech Limited for tutorials and guidance as I learned basic networking and web scripting and also my level mates, brothers, sisters, acquaintances and non-departmental staff/students and everyone unmentioned for being and working at various capacities as I successfully pursued a degree in Computer Science in the university with erudition.

My appreciation goes out to Nigeria Internet Registration Association (NIRA) Lagos, the organisation I was attached to during my SIWES internship, where this started for their contributions and also to all others not mentioned who contributed in various ways whose works/products formed parts of my information source and data resources.

ABSTRACT

This project work ‘Design and Development of a Virtual Community for Collaboration on Businesses and Projects’ was aimed at creating a computer based platform to empower entrepreneurs/freelancers and organisations by interconnecting them to each other as sponsors, collaborators, teams and investors for productivity and progress in business. The project work is also aimed at improvement of the quality of employees and contractors engaged in business/work/office, increasing productivity - breaking the geo-location limitations, create efficient project management and collaboration, socialise the business world. The project has the following objectives; creating a possibility of hiring people and services nationwide, provide support for advertisement and publications, possibility of scheduling and holding meetings online or physically nationwide and also support sharing and view of the activities of users/accounts on the platform. The project analysed the platform, system requirements and implemented the Object Oriented Model for methodology. The OOM involved the sourcing, implementation, testing and reuse of software components. The platform was designed is to be in accordance with specifications to satisfy the requirements. The program was designed and the functions were implemented with Hyper-text Pre-processor (PHP), Cascading Style Sheet (CSS), MySQL and Hyper-text Mark-up Language (HTML) which constituted in a web-based platform that allows users send requests, create posts, share posts, view posts, delete posts, create and edit user accounts, place adverts and afford the program manager access to manage and regulate adverts. The web platform was hosted locally via ‘localhost’ and composed of a MySQL database which was managed via phpMyAdmin both provided by XAMPP Server. Being a web-based platform a web browser is needed to use the product. The instruments in this case would include the web browser, XAMPP server and an IDE (Sublime Text 3 and NetBeans 8.2 IDEs were used for the development). The platform would enhance freelancing, boost entrepreneurs’ growth, create a common ground for various scales of business, implement computer science into business management and administration, utilise social virtual communities for business development and result in economic improvement by increased productivity, employment rate. And results from researches show that many of people search the internet looking for other individuals having required/desired/similar interests, skills, knowledge, provisions and opinions and who are willing to share. And that the best platform/domain for such sharing and discovery is a virtual community (VC). Further evaluations, improvements and advancements are intended to see the program develop to meet all business/corporate standards.
